## Three examples

To break down 1 into the sum of fractions of numerator 1.

Can you find two distinct integers  $a$  et  $b$  such as:  $1 = \frac{1}{a} + \frac{1}{b}$ ?

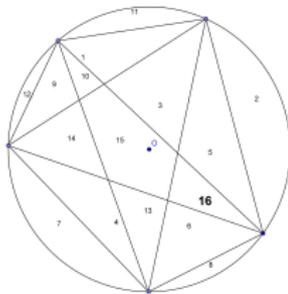

Can you find three distinct integers  $a$ ,  $b$  and  $c$  such as:  $1 = \frac{1}{a} + \frac{1}{b} + \frac{1}{c}$ ?

Can you find four distinct integers  $a$ ,  $b$ ,  $c$  and  $d$  such as:  $1 = \frac{1}{a} + \frac{1}{b} + \frac{1}{c} + \frac{1}{d}$ ?

Continue...

## Three examples

### Regions inside the circle

To find the maximum number of regions inside a circle by joining  $n$  points of a circle;

## Three examples

### Polya urns.

An urn contains two balls: a white one and a black one. At each time a ball is drawn from the urn. The contents of the urn are then altered, putting one more ball in the urn of the same color of the drawn ball. Study the dynamic of the urn.

- $\frac{1}{a} + \frac{1}{b} = 1$  hence  $a - b = ab$
- no  $a + b = ab$
- then  $-a - b = -ab$
- we have made a great headway! (*laugh*)
- I hope we are not going to have something like that in our next assesment!

Presentation of the resource

V : The smallest fraction with integers is one half; you can't have a smaller one.

V : 1 isn't possible, the smallest fraction is  $\frac{1}{2}$ .

T : Can you explain?

V : For the second question:  $a = 2, b = 3, c = 6$  for the third question:  $3 a = 2, b = 3, c = 9, d = 18$

R : Why is the first question impossible?

V : Write the first (*fractions with numerator 1*)

R : And why is it impossible?

V : In any case,  $a$  must be 2

R : Perhaps, is there an other fraction with a numerator 1 which gives 0.5...

A difficulty is to transform a productive mathematical situation into a productive didactical situation

”Setting up a real experimental approach, in which the different steps are not bypassed needs appropriate situations and a demanding didactical management”

Michèle Artigue, 2007

example 2

Presentation  
of the resource

An urn contains two balls: a white one and a black one. At each time a ball is drawn from the urn. The contents of the urn are then altered, putting one more ball in the urn of the same color of the drawn ball. Study the contents of the urn.

example 2

Presentation  
of the resource

- The experiments are local;
- Institutionalization has to take into account the different approaches;
- The mathematical analysis helps to understand these different approaches.
